1. 计算 calculate:

$$(x^4 - x^2 - 4x - 4) \div (x - 2) \div (x + 1).$$

2. 若 x = 5.455, y = 4.545, 求  $x^2 - y^2$  的值。 If x = 5.455, y = 4.545, find the value of  $x^2 - y^2$ .
